Note:

- 1.Reflow soldering should not be done more than two times. In the case of more than 24 hours passed soldering after first, LEDs will be damaged. 回流焊次数不可以超过两次，两次回流焊的时间间隔如果超过24小时，LED可能由于吸湿而损坏。
- 2.When soldering ,do not put stress on the LEDs during heating. 当焊接时，不要在材料受热时用力压透镜表面。
- 3.It is commended that use the middle temperature solder past. 推荐使用中温锡膏生产加工。
- 4.After soldering ,do not deal with the product before its temperature drop down to room temperature. 在焊接完成后，待产品温度下降到室温后，再进行其它处理。
- 5.When hand soldering, keep the temperature of iron below less 300°C less than 3 seconds. 当手工焊接时，烙铁的温度必须小于300°C，时间不可超过3秒。
6. The hand solder should be done only one time. 手工焊接只可焊接一次。
7. Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double- head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or will not be damaged by repairing. LED回流焊后不应该修复，当必须修复时，必须使用双头烙铁，而且事先应确认这种方式会不会损坏LED本身的特性。

Use the matters needing attention(使用注意事项)

1、LED operating environment and sulfur element composition cannot be over 100PPM in the LED mating usage material. This is provided for informational purposes only and is not a warranty or endorsement.

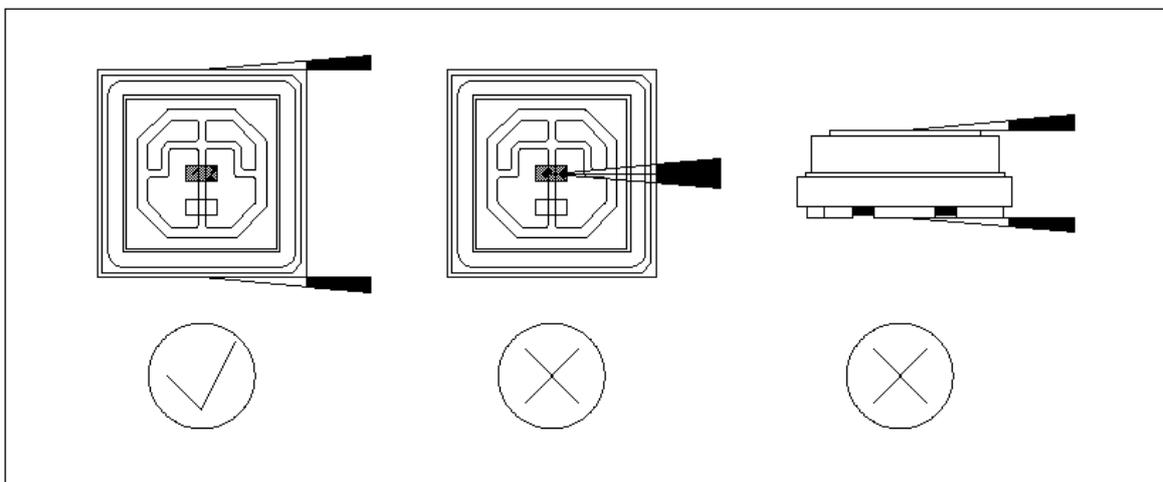

LED工作环境及与LED适配的材料中硫元素及化合物成份不可超过100PPM。这只是一个建议，不作任何品质担保。

2、In order to prevent external material from getting into the inside of LED, which may cause the malfunction of LED, the single content of Bromine element is required to be less than 900PPM, the single content of Chlorine element is required to be less than 900PPM, the total content of Bromine element and Chlorine element in the external materials of the application products is required to be less than 1500PPM. This is provided for informational purposes only and is not a warranty or endorsement.

为了防止外界物质进入LED内部以造成LED的损伤，所处环境及所用套件等等，单一的溴元素含量要求小于900PPM，单一氯元素含量要求小于900PPM，溴元素与氯元素总含量必须小于1500PPM。这只是一个建议，不作任何品质担保。

3、VOCs (Volatile organic compounds) emitted from materials used in the construction of fixtures can penetrate silicone encapsulants of LEDs and discolor when exposed to heat and photonic energy. The result can be a significant loss of light output from the fixture. Knowledge of the properties of the materials selected to be used in the construction of fixtures can help prevent these issues. Rafand advises against the use of any chemicals or materials that have been found or are suspected to have an adverse affect on device performance or reliability. To verify compatibility, Rafand recommends that all chemicals and materials be tested in the specific application and environment for which they are intended to be used. Attaching LEDs, do not use adhesives that outgas organic vapor.

应用套件中的挥发性物质会渗透到LED内部，在通电产生光子及热的条件下，会导致LED变色，进而造成严重光衰，提前了解套件材料能够避免产生这些问题。我司反对使用任何对LED器件的性能或者可靠性有害的物质或材料，不管这些材料是已经证实了的还是仅仅怀疑有害。针对特定的用途和使用环境，我司建议对所有的物质和材料进行相容性的测试。在贴装LED时候，不要使用能产生有机挥发性气体的粘结剂。

Use the matters needing attention(使用注意事项)

4、 Handle the component along the side surface by using forceps or appropriate tools; do not directly touch or Handle the lens surface, it may damage the internal circuitry. 通过使用适当的工具从材料侧面夹取，不可直接用手或尖锐金属压透镜表面，它可能会损坏内部电路。

5、 In designing a circuit, the current through each LED must be exceed the absolute maximum rating specified for each LED. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage. 设计电路时，通过LED的电流不能超过规定的最大值。电路设计必须保证只有在开启或者关闭的时候出现正向电压的变化，不要施加反压，否则会损坏LED。

6、 Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, color change and so on. Please consider the heat generation of the LEDs when making the system design. LED容易因为自身的发热和环境的温度改变而改变，温度升高会降低LED发光效率，影响发光颜色，所以在设计时应充分考虑散热问题。

7、 Compared to standard encapsulants and the surface is more likely to attract dust, requiring special care during processing. In cases where a minimal level of dirt and dust particles cannot be guaranteed, a suitable cleaning solution must be applied to the surface after the soldering of components. Rafand suggests using isopropyl alcohol for cleaning. In case other solvents are used, it must be assured that these solvents do not dissolve the package or resin. Ultrasonic cleaning is not recommended. Ultrasonic cleaning may cause damage to the LED. 与其他封装胶相比，应用时应特别注意，当对产品洁净度要求较高时，回流焊以后需要采用恰当的清洗方式，我们推荐用异丙醇作清洗剂，如需要用到其他清洗剂，必须保证不会破坏封装体，超声清洗可能会对LED带来损害，不推荐这种清洗方式。

8、 To avoid the moisture penetration, we recommend store in a dry box with a desiccant. The recommended storage temperature range is 5°C to 30°C and a maximum humidity of RH50%. If the color of the desiccant changes, components should be dried for 10-12hr at 60±5°C. 为了避免湿气进入，产品应该保存在干燥的地方，同时需要使用干燥剂，推荐的储存温度是5°C到30°C，最大湿度不能超过50%，如果湿度卡和干燥剂变色了，需要烘烤10-12小时，烘烤温度为60±5°C。

9、 Similar to most Solid state devices; LEDs are sensitive to Electro-Static Discharge (ESD) and Electrical Over Stress (EOS). 像其他的半导体电子器件一样，LED对静电过流击穿非常敏感，需要做好防护。

10、 When the UV led is lighting, users must not look straight at the UV leds, or, the UV light will damage your eyes permanently; When it lighting a long time , human or other animals must keep away from it ,only if they put on the UV protective clothing (include your eyes). 紫外LED使用或者点亮时人眼不可直视发光器件，这将会对人的眼睛造成无法恢复的伤害；当紫外LED长期点亮时，人或者其他动物不可长期停留在相同空间，除非人和其他动物均有有效的紫外防护措施。

11、 Other points for attention, please refer to our LED usermanual. After the product life cycle for recycling. 其它注意事项请参照LED使用手册。产品生命周期后进行回收处理。
